## **The Problem Statement**

Proper management of academic and campus life for college students to maintain balance, increase productivity, and capitalize on more opportunities by eliminating clutter.

---

## **Theme Connection**

As the theme tells about the distraction and overload of inputs resulting in redundant use of time which as mentioned is ample, our website enables students to manage all of these by arming them with a powerful resource that provides for a more structured life at college.

---

## **Proposed Solution**

The proposed solution is a calendar that uses color encoding based on the type and timing of events. It is customized to the user and follows the logic of the Eisenhower Matrix, where quadrants 1 and 2 contain important and high-priority events. It is more than just a calendar; it features two modes: Study Mode and Campus Mode. Study Mode focuses strictly on academic-related tasks and club activities, while Campus Mode provides updates on fests, college events, and other informal campus happenings.
